**David Pimentel Ph.D. : CRC Handbook of Pest Management in Agriculture, Second Edition, Volume III** before purchasing it in order to gage whether or not it would be worth my time, and all praised CRC Handbook of Pest Management in Agriculture, Second Edition, Volume III:

The second edition of the CRC Handbook of Pest Management in Agriculture examines the interdependency of agricultural pest management strategies. Topics discussed include agricultural losses to pests; chemical and non-chemical control technologies; pesticide resistance; environmental impacts of pesticides; biological pest control; host-plant resistance; crop rotations and other cultural controls; assessments of the relative effectiveness, benefits, and risks of various pest control strategies; and improved pest control approaches for making agriculture more profitable and sustainable. This is a "must have" book for entomologists, plant pathologists, and weed control specialists, in addition to university and research institute libraries.
