David Kawami : Cut Assemble Paper Dragons That Fly (Dover Children's Activity Books) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Cut Assemble Paper Dragons That Fly (Dover Children's Activity Books):

1 of 1 people found the following review helpful. Good flyers! By J.Prather I purchased these cut and assemble paper dragons for a children's activity aimed at grades 4 to 6. After receiving them, I decided they would be far too difficult to assemble in the limited time I had available, so I ended up constructing all the dragons myself and then giving them to the kids to fly. Assembly requires precise cutting, folding and gluing. I had little difficulty putting them together, and was able to assemble three dragons in about an hour. A young person who is accustomed to precise craft work will have no trouble putting these together with perhaps just a bit of adult help. They are actually easier than the

instructions imply, I liked the different dragon designs, and they prompted much discussion among the kids about which would fly better and why. They were all pretty good flyers, but some were better than others. The designs are whimsical, and while I felt that the colors could have been a bit more vibrant, they were all unique. This dragon collection is a good value for the price, but just be aware of its limitation. 0 of 0 people found the following review helpful. Of course the images are beautiful. So magical for young boys. 0 of 0 people found the following review helpful. Not for small child By nancypacitto Ok

Toys that fly and the magical fascination of mythical monsters make this collection of cut and assemble dragons doubly appealing. Papercraft expert David Kawami has created eight colorful beasts complete with scales, batlike wings, and ferocious stares that beginning as well as advanced model builders can easily construct and set into motion. By following simple step-by-step instructions and explanatory diagrams even the most inexperienced hands can fashion imaginative and delightfully harmless creatures such as the sky blue Draconis zephyr otherwise known as Windy. Or, bring a bright green Woody (Draconis sylva) to life along with such scaly companions as Sunny, Stormy, and four other legendary creatures out of the past. Simply cut out each wing and body structure, fold and score along broken lines with a straightedge and glue the parts together. Only a few common household items are needed: scissors, paper clips, a sharp knife, and toothpicks or a fine brush for applying glue. Designed not only for flying, these serpentlike monsters of mythology also make eye-catching decorations and whimsical mobiles. Paper engineers, dragon lovers as well as youngsters of all ages can look forward to hours of fun-filled entertainment with this easily affordable collection.
